***Magnys Deepens Technical Expertise By
Adding Two Controls Engineers To Team***

22 January 2007 – Novi, Mich. – Magnys, a world leader in manufacturing emulation services, has deepened its manufacturing expertise by adding a pair of experienced controls engineers to its team of software developers and engineers.

According to Joe Hukan, general manager of Magnys' emulation consulting business, the additions of Randy Bradakis and Mark Keylon will help the company continue to help the company contribute to its customers' on-time, on-budget, quality launches.

"The ability to solve real-world manufacturing challenges in a virtual environment is a crucial benefit that helps our customers maximize the efficiency of manufacturing operations," Hukan said. "Randy and Mark will allow us to maintain our focus on helping customers save significant time and money."

Bradakis comes to Magnys after running his own consulting company since 2003. Prior to that, he spent several years as a controls engineer with paint, material handling and industrial controls companies. Keylon also has extensive experience as a controls engineer and PLC training specialist for industrial automation companies. In addition, he spent 8 years as a technician supervisor with the U.S. Navy, and graduated from the Naval Nuclear Power School.
