***Magnys Continues Growth In India and Eastern Europe***

**2 April 2007** – Novi, Mich. – Magnys Innovative Solutions announces it is continuing to expand its presence in the rapidly-growing economies of India and Eastern Europe.

In India, Magnys is marking the seventh year of operations for its Larvik subsidiary in Mumbai. The business is staffed by a team of simulation engineers and has experienced 40% growth in the last year. Larvik provides advanced simulation solutions for local customers, and supports projects that are managed in the U.S.

“India has grown into one of the world’s leading centers for software development, with an increasing number of North American and European companies establishing offices or strategic partnerships with Indian-based companies,” said Rocco Pollifrone, president, Magnys Innovative Solutions. “Larvik continues to grow due to the exceptional value our team provides customers in India and around the world.”

In addition, Magnys has opened an office in Slovakia, with automotive veteran Ivo Kulik coordinating activity. This expansion will allow Magnys to offer engineering services 24 hours a day, providing customers with the fast turnaround they require in order to remain competitive in a global economy.

“Our customers continue to expand into new markets around the world, and they need suppliers that can support these operations,” Pollifrone said. “We have made a strategic decision to continue investing in our businesses, working in partnership with our

customers to deliver the engineering and software solutions they need to meet increasingly demanding timelines and budgets.”

***About Magnys***

Magnys Innovative Solutions provides a range of services to help customers become more efficient and profitable. Working closely with customers, Magnys professionals expertly assess manufacturing operations, and then develop and implement results-oriented action plans to solve even the most complicated manufacturing challenges.
